

## Plaisted Accublender™

### Consistent engineered soils – Guaranteed.

It's all about precise measurement and blending. With our creation of the Accublender in 1995, customers' requests for a consistent quality soil was answered. Select from one of our standard mixes, or have us custom blend a mix by specifying the percentage of each product wanted in the mix.

Each ingredient is put into a separate bin then ingredients are precisely fed onto the Accublender belt, layering one on top of the other. As they fall through special screens and paddles, the ingredients are blended together creating a consistent product, load after load. Our Accublender equipment is designed to ensure consistent, quality blends:

- Mechanical paddle wheel ensures uniformity
- On-board screen deck removes oversized particles
- Automatically adjusts for flow rates of materials
- Built-in sensors stop the conveyor belt if feed bins run out of material

The Accublender™ 4 can blend up to four components and has an optional fertilizer bin. It precisely blends up to 2,500 tons of material a day. Our soil experts can help you determine the best blends for your application.

The Accublender™ 2 is a portable two-bin blender capable of blending up to 2,500 tons of material a day on your site. This is ideal for locations where acceptable materials are available

to blend and there is sufficient space. The minimum quantity for on-site blending is xxxxx.

### Computerized Blending

Here are some of the most popular items blended together in the Accublender:

Plaisted's screened soils, peat, sand, compost, inorganic amendments, clay, silt, composted pine bark, fertilizer, lightweight rooftop aggregate.
