

Stone Strong® Retaining Wall Products

Plaisted Companies, Inc., Elk River, Minnesota is a licensed manufacturer and distributor of the **Stone Strong® Retaining Wall** systems. **Stone Strong®** walls provide an engineered solution for gravity retaining walls that is attractive and structurally sound. The massive size and scale of this block makes this product ideal for commercial and municipal applications. The walls can reach heights of 12-15' without the use of a geogrid or other tiebacks, depending upon the site and soil conditions. The retaining wall system incorporates an internal drainage system through a void in the center of each block. The tapered sides of the blocks allow for straight, concave, convex and even circular designs. Due to the massive size of the blocks labor time and installation costs are greatly reduced.

Q: Can the block be stained?

A: Yes, the stones can be stained to match any color imaginable – so it can fit seamlessly into your design and the natural surrounds of the landscape. A concrete penetrating stain is recommended.

Q: What patterns are available for the stone?

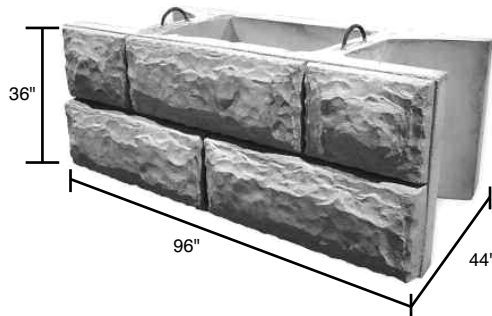

A: The **Chiseled Granite** pattern matches the classic look of natural chiseled stone. The **Split Limestone** pattern matches the organic look of rough-hewn natural stone.

Stone Strong Stock Products

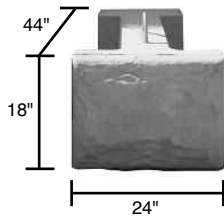

24 SF Block

5,600 lbs.

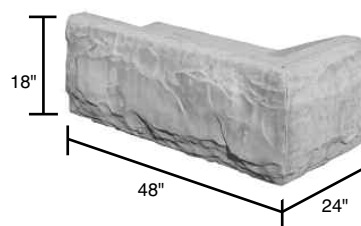

3 SF Block

900 lbs.

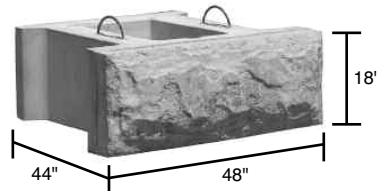

End Unit – 9 SF

1,900 lbs.
