

# Plaisted's Growers Mix

**Plaisted's Growers Mix** consists of composted pine bark, coarse fibrous Peat, Inc. peat, and **Plaisted Coarse Sand**. The composted pine bark creates air space and allows water to the root system.

The coarse fibrous peat allows maximum water holding capacity and helps retain nutrients for the plant.

**Plaisted's Coarse Sand** is specially graded to allow for good drainage as well as adding stability and weight to the **Plaisted's Growers Mix**.

Pine bark combined with peat, and sand improves the condition of heavy clay soil by improving drainage, decreasing root disease; helps keep the soil loose and creates a better environment for the roots to grow and expand. In sandy soil, it reduces the amount of watering and fertilizer required.

**Q.** Why should I use **Plaisted's Growers Mix**?

**A.** It is the best soil improvement product on the market today. It will give you better plant survival, plant growth, flowering and less plant maintenance.

**Q.** Do nursery and greenhouse growers use composted pine bark and fibrous coarse peat when growing their products?

**A.** Yes, most growers do. Growers have found over time, these are the best ingredients for obtaining best growth.

**Q.** Sounds like it will be expensive?

**A.** **Plaisted's Growers Mix** is a very affordable amendment. The amount of product needed will depend upon what you are planting and how deep you will dig into the ground. We recommend mixing 25% **Plaisted's Growers Mix** with 75% native soil.

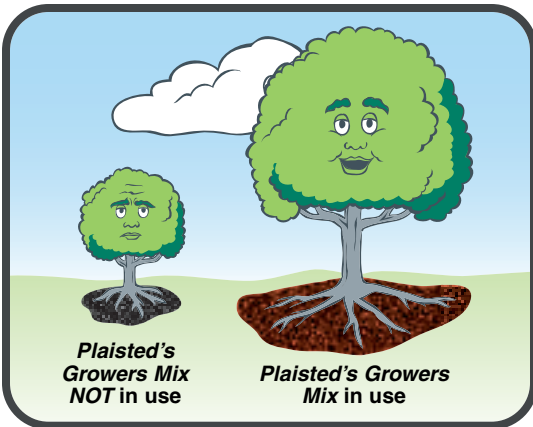

For example: If you are digging 6 inches deep, place two inches of **Plaisted's Growers Mix** on top and rototill it in.

# Plaisted's Growers Mix
